Costar Video Systems Releases New DVRs to the Central Point Family of Products

Coppell, Texas – November 21, 2019 – Costar Video Systems, a subsidiary of Costar Technologies, Inc. (OTC Markets Group: CSTI), officially announced today new product additions to their Central Point family of products.

New Central Point DVRs are available in 4, 8, and 16 channel options and fully support a range of similar easy to install HD Analog cameras from 2MP and 4MP with more products and features to come. The added 4-megapixel resolution increases our customers ability to recognize objects and activity with much greater clarity. The hard drives inside each recorder also support multiple RAID recording formats and external storage options if expanded capacity is needed.

“The Central Point platform gives us the flexibility to reach a segment of the market that we have not catered to in the past,” says Jeff Cullop, VP of Product Management. “I’m excited to see where this new offering will lead us.”

To review the products, check out Costar’s [Central Point DVR](#) page and to see the new 4mp cameras by visiting [CBT4H12IFW](#), [CDT4H12IFW](#), and [CDT4H12VIFW](#).

Earlier in 2019 Costar announced the brand-new video management system called Central Point. This powerful new system capitalizes on technology called Central Connect Technology and utilizes many advanced features such as user management, logical grouping, multiple pages, mapping, event tracking, health status, as well as basic live playback.

Harnessing their years of surveillance experience, Costar Video Systems has developed a VMS built for a wide spectrum of applications that fit both economical and large-scale projects. Central Connect Technology, the technology created specifically for Central Point, helps create a hassle-free and plug-and-play experience for system integrators. In addition, Costar has also placed emphasis on a feature rich VMS toolset to separate it from similar systems on the market.

Central Point is available to download on Costar’s website for Windows PC, iOS, and mobile. For more information about Costar Video Systems, visit www.costarvideo.com.
