

HDVR'S Storage Media Fireproof Box

Description:

Mirrored recording provides automatic redundancy to your HDVR's storage media using the same settings (frame rate, image quality, and resolution).

Costar Mobile's HDVR system can provide 2 different mirror recording function. One is internal mirror recording (the SD card slot inside of the HDVR device). The other is via our external CMR-FIREPROOF box. This box is specially designed to protect your video/audio files in the last minutes prior to, during and after a fire, explosion- or accident.

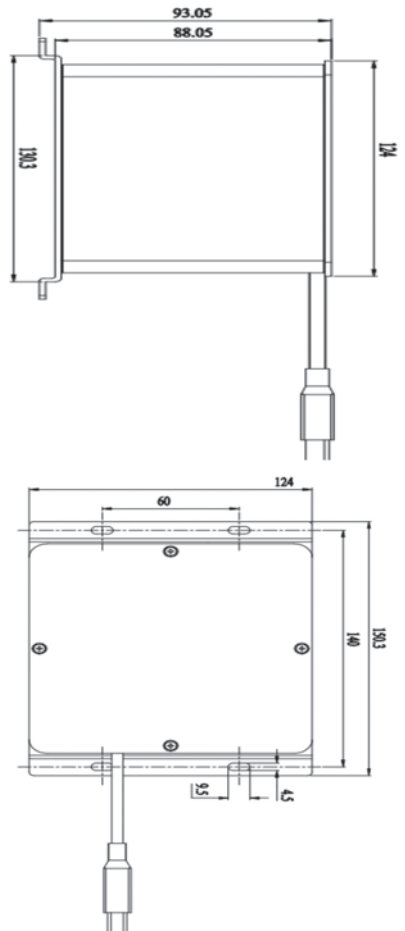

Features:

- USB interface provides external mirrored recording for redundancy
- Rugged shell securely protects your recorded data
- Professionally-developed, industrial-level 32GB SD Card inside (*Optional 128GB SD available*)
- Super resistance to high temperature: able to protect the SD Card for 20 minutes in 500°C
- Waterproof, dustproof and explosive proof
- Small size and easy installation

CMR-Fireproof Box Specifications
